

# High Performance Computing + Cloud Computing A, B

**I N S T R U C T I O N S   F O R   U S A G E**

**DATA SCIENCE &  
ARTIFICIAL INTELLIGENCE**

**SCIENTIFIC &  
DATA-INTENSIVE COMPUTING**

**2024-2025 @ Università di Trieste**

# Outline

What you  
will learn

How it  
works

Some  
common  
rules & principles

# What you will learn

<b>High Perform. Computing</b>	<b>Cloud Computing</b>	
	<b>Basic</b>	<b>Advanced</b>
simple introduction to HPC and parallel programming.  propedeutic to Advanced HPC.	Basic concepts of Cloud Computing	Kubernetes & HPC on cloud infrastructures
curriculum SDIC+DSAI	SDIC+DSAI+more	SDIC+more

# What you will learn - HPC

## **What is High Performance Computing**

Tools, basic and not-so-basic concepts

## **Modern computer architecture**

Why is it there and what will be next; how, and why, to «optimize» a code for such an architecture

## **Parallel programming**

Grow-up and use large HPC facilities to tackle large (and complex) problems

## **Attitude**

Don't be (only) a user of pre-cooked tools that you consider as black-boxes

# What you will learn - Cloud Computing A

## What is Cloud Computing

Cloud, XaaS, Properties and basic implementations

## Modern cloud architecture and infrastructure

Basic concepts and tutorials. Computing and Data  
Cloud

## Virtual Machines and Containers

What is a VM and how to use it, experiments with VBox

What is a container and how to use it (Docker)

## Attitude

Don't be (only) a user of pre-cooked tools that you consider as black-boxes

Tools, basic and  
not-so-basic  
concepts  
Tutorials and  
experiments

# What you will learn - Cloud Computing B

## **Introduction to Kubernetes**

Kubernetes orchestrate services. Here we will understand what stuff is needed to keep a service up and running.

## **Installing and managing Kubernetes**

After the understanding, here we will deploy and manage this stuff. Once the orchestrator elements are covered we will deploy client server applications and test their behaviour.

## **Installing and benchmarking HPC applications on Kubernetes**

Finally we will go deeper in to container primitives and explore the challenges that HPC workloads face in a kubernetes environment.

# Outline

What you  
will learn

How it  
works

Some  
common  
rules & principles

# How it works

The baseline is:

1) **lectures:** we prepare slides and examples and we expose them.

Some of the lectures are actually hands-on sessions and tutorials

The lectures will be recorded and you'll find the related files both in the Teams and on a Google Drive in the long-term.

The pdfs that we will use and the example codes will be put in a GitHub repository.

# How it works

## Lecture timetable for the first semester:

	Sett		Ottobre								
orario	gio 26	ven 27	gio 3	ven 4	gio 10	ven 11	gio 17	ven 18	gio 24	ven 25	gio 31
(11:00 - 14:00) - Aula 5C (Edificio H2bis)		Intro to cloud (2h)		Networking (2h)		Benchmark (2h)		LIBERO PER ADVANCED		coud demo (2h)	
(17:00 - 19:00) - Aula 2A Morin (Edificio H2bis)	Intro al corso 1h		coud main concepts (2h)		Virtualization (2h)		LIBERO PER ADVANCED		Cloud models (2h)		data cloud (2h)
	November								Dicer		
orario	gio 7	ven 8	gio 14	ven15	gio 21	ven 22	gio 28	ven 29	gio 5	ven 6	gio 12
(11:00 - 14:00) - Aula 5C (Edificio H2bis)		containers (2h)		1 Advance (2h)		3 Advance (2h)		5 Advance (2h)		7 Advance (2h)	
(17:00 - 19:00) - Aula 2A Morin (Edificio H2bis)	containers (2h)	containers (2h)	k8s Intro (2h)		2 Advance (2h)		4 Advance (2h)		6 Advance (2h)		8 Advance (2h)
	Dicembre										
	gio 12	ven 13	gio 19	ven 20							
		9 Advance (2h)		11 Advance (2h)							
	8 Advance (2h)		10 Advance (2h)	12 Advance (2h)							

Basic

Advance

Fridays afternoon on demand....

# How it works

The baseline is:

1) **lectures:** we prepare slides and examples and we expose them.

The screenshot shows the GitHub repository page for 'Foundations-of-HPC'. The repository is public and has 10 repositories, 19 stars, and 4 forks. The main repository is 'Foundations\_of\_HPC\_2022', which is public and has 30 stars and 19 forks. It contains lecture slides, codes, and materials for both basic and advanced 'Foundations of HPC' courses. Other repositories listed include 'Foundations\_of\_HPC\_2021', 'Foundations\_of\_HPC\_2020', 'High-Performance-Computing-2023', 'Cloud-Basic-2023', and 'Cloud-advanced-2023'. The repository is described as containing materials from the homonym course at DSSC, University of Trieste, and at the Master in HPC, SISSA/ICTP. The URL https://dssc.units.it is provided.

`github.com/Foundations-of-HPC`

`/High-Performance-Computing-2024`  
`/Cloud-Basic-2024`  
`/Cloud-Advanced-2024`

**The repos are online and public; in the landing page you find the detailed list of the lectures.**

# How it works

The baseline is:

- 1) **lectures:** we prepare slides and examples and we expose them.
- 2) **questions:** you ask what you want whenever you want; if we say something wrong or stupid, you notice that and you raise your hand.

# How it works

The baseline is:

- 1) **lectures:** we prepare slides and examples
- 2) **questions:** you ask what you want whenever you want
- 3) **discussions:** you ask to discuss much deeper some aspects or topics from previous/future lectures; you read other materials and bring them into the discussions.

# How it works

The baseline is:

- 1) **lectures:** we prepare slides and examples
- 2) **questions:** you ask what you want whenever you want
- 3) **discussions:** you ask to discuss much deeper
- 4) **Office hours:** each of us will be available weekly an hour (we'll communicate which one). However, we are ready for chatting, Q&A or alike upon appointment

# Outline

What you  
will learn

How it  
works

Some  
common  
rules & principles

# Common rules & principles

- 1) **Don't be shy**, every question is legitimate and useful; ask what you do not understand (or we explain poorly), comment what you want to explore.
- 2) Our main focus is that you **learn**, not to grade you.
- 3) Learning is a **process**, not a result; we're interested in both your learning process *and* in your final level.
- 4) This course is gonna be **tough** for many, if not all, of you; it is because we'll challenge you to go beyond your (supposed) limits, and we'll consider you as intelligent adults not as *poor students*.

# Common rules & principles

- 5) We (you and us) will be **honest** in all respects (giving/doing assignments, in the mutual relationships, ... ).
- 6) Nobody is perfect or always right: **errors and mistakes are natural**; what matters more is what will follow-up.
- 7) We're not the guardians of your life: you decide how much you want to learn and how much to profit from opportunities (among them there is following this course).

# Common rules & principles

- 8) Although we firmly believe in **sharing and commons**.  
*Open source* is among the greatest achievements in this field.  
We all have learnt from other people's codes, but we all have learnt even more from our own mistakes and efforts.

We remind you that **learning is a process in our personal brain, not in others' one**.

We encourage you to **clash with your limits** long before you decide to take inspiration from available code (for sure you may find something useful for the assignments) online.

NOTE: *It may be risky supposing that at the examination we will be unable to spot whether you fully understand the code you have submitted or not.. :-)*

# Exam / 1

Eventually, this journey ends with an exam and an evaluation of your level of comprehension and acquired skills.

The evaluation consists in **2 steps**

1. You complete a final assignment that will be given before the end of the lecture;
2. you attend the exam session
  - a) at the begin all the attendees will answer to some simple written questions on the topics covered in the lectures (~15min)
  - b) every candidate will discuss individually its own assignment and the answers to the questions given at the begin of the exam

# Exam / 2

## The final assignment

We will prepare a set of exercises, and you will have to pick **2 for HPC**, **1 for CC Basic** and **1 for CC Advanced**.

You must solve the problems, write a report about your work and send us the report 1 week before the exam session.

You must also upload the code that you have written on a git.

No working group is allowed (i.e. everyone has to write its own report).

# Exam / 3

You will be allowed to **repeat** the oral exam **without any constraint. However**, please

- (i) do not try multiple times in a short time span ( save our time and take yours to digest better )
- (ii) self-organize with your peers so to have groups of you that ask for an exam
- (iii) there will be regular exam sessions, however usually we do prefer to agree with small groups of students to have exams whenever it fits at best.

# Exam / 4

Here is what ideally you should expect as final grade:

18-20	Too embarrassing to mention
21-23	You got a basic understanding of the matter; slightly more advanced topics or unexpected facts put you in trouble
24-26	You have a robust understanding of the matter, upon thinking you can explore rough terrain
27	You have a firm comprehension of the matter, you sense the right direction and solution
28	Like 27 + you see the solution; some added shining
30	Like 28, but with shining
30 <i>cum laude</i>	Like 30, but you really surprise us
29	Some accident happened along the route to 30

# Resumé

Learning is a process that happens only together, among human beings.

**Racism, sexism, homophobia, culturalism, discrimination in every sense are not allowed and definitely rejected.**

Help us in building a better milieu and a wonderful experience in sharing this journey together.

*Please fill the questionnaire:*

*<https://forms.gle/XLP4MpTxvq78zn5d9>*

# Questions, comments, doubts, fears... ?

Now is the time (but another one will fit as well).

But, in case that later on you feel *l'esprit de l'escalier*, you can still contact us:
